

Rochester Students' Health Services	Year	<b>SCCASA Research: Supporting Children and Caregivers Affected by Substance Abuse</b>
Need for a clinic at the Rochester Alternative Learning Center (ALC), a school for teens at academic risk with multiple risk factors, was identified.	2012	
Rochester Students' Health Services (RSHS), a 501(c)(3) non-profit organization, was formed to offer free health care to ALC students and their children.	2013	
RSHS Clinic officially opened.	2014	
Providers noted that many students at the ALC had experienced multiple adverse childhood experiences (ACEs), including parental substance use disorder (SUD).	2015	
	2016	
	2017	Faculty members at Winona State University (WSU) recognized the limited resources available for families and children affected by a loved one's SUD.  Decision was made to further explore the problem.
Feasibility of a school-based clinic that addressed unmet needs, provided quality health care, and improved health outcomes had been demonstrated.	2018	A Community Advisory Committee was formed.  Decision was made to conduct research, using a community-based participative research approach.  Consultation from the Mayo Clinic Community Engaged Research Board was obtained.  A 3-phase research plan (SCCASA) was identified.  A Phase 1 research proposal was developed.
Mayo Clinic assumed operation of the Clinic.  The Board of Directors voted to retain the non-profit under new leadership and an amended purpose (to develop resources and support for families impacted by SUD).	2019	The research proposal was approved by the WSU Institutional Review Board.  Data collection began.  The SCCASA leadership team, with the recommendation of the Community Advisory Committee, voted to merge with the RSHS non-profit.
<p style="text-align: center;">In 2019, the non-profit and the SCCASA team officially merged to create  <b>Community Pathways to Family Health &amp; Recovery</b>,  with a new Board of Directors and a new organizational structure.</p>
